Opis produktu

AMT's 1/25 scale International Transtar 4300 Eagle model kit is a great project for any experienced big rig modeler. Now featuring a stunning Sprite theme. Add it to your collection today!

At 10.75 inches long, the 4300 Eagle emphasizes size with authentic features, including a V-8 diesel engine, sleeper cab, visor, one-piece tilting hood/fender assembly, functional fifth wheel, a detailed instrument panel, accessible battery box with removable cover, a CB radio with twin antennas and more. Contains ALL-NEW Sprite water slide decals and packaging.

Features:

- 1:25 scale, skill level 3, paint & glue required
- 250 parts
- Molded in white, clear, and chrome-plated parts
- Black vinyl tires
- Built size: 10.75 inches long
- Ages 14+

Skill Level 1 (No painting, No glue necessary, Ages 8+)

Skill Level 1 model kits are aimed at the younger builder, those who may not have as much model building experience or even someone getting back into modeling after a number of years. The model kits are often molded in color, so no painting is needed to have a good looking representation when finished. They also are designed to snap together without requiring the use of glues or cements. Skill Level 1 kits also typically feature a smaller number of parts as well as a limited amount of very small parts. Skill Level 1 kits include sticker sheets instead of the water-release decal sheets found in our Skill Level 2 and 3 kits. Less mess and more fun for our Skill Level 1 builders!

Skill Level 2 (Paint and Glue needed, Ages 10+)

This is the largest and most popular group of model kits. Most Skill Level 2 kits are generally molded in a neutral color such as white to make painting easier, a traditional modeler preference. The molded color will appear in the information section on the box side as well as the approximate number of parts contained in the kit. The greater the part count, the greater the number of smaller parts and the greater the detail. Glue or cement will be required to assemble the parts of Skill Level 2 model kits. These model kits feature traditional water-release decals, offering greater detail, more colors and are much thinner than stickers for a more realistic build.

Skill Level 3 (Paint and Glue needed, Ages 12+)

Skill Level 3 kits are advanced kits that offer an appropriate level of detail and authenticity to the builder looking for a challenge. Frequently, extra parts are supplied for multiple building experiences. It's suggested that the builder have some previous building experience before attempting a Skill Level 3 model kit, due to the complexity of some of the assemblies and/or the multiple color painting schemes. Skill Level 3 kits also require glue or cement for assembly and feature water-release decal sheets.
